### ABSTRACT

In order to compile attrition/retention information for students in the State University of New York (SUNY) system, this study identifies and charts the flow of two full-time, first-time student cohorts: (1) students first enrolled in fall 1970 in bachelor degree programs; (2) students first enrolled in fall 1972 in two-year degree programs. The tables in this study present information in the form of flow charts which divide the cohorts into various subdivisions reflecting the relative success of students in achieving their educational objectives. Data are presented for the SUNY systems as a whole, and for individual SUNY institutions, including university centers, university colleges, specialized colleges, statutory colleges, health sciences centers, agricultural and technical colleges, and community colleges. The current data indicate that SUNY maintains a favorable position with regard to comparable national figures. The most striking characteristic of the current data, as compared with data from previous reports, is that summary data for SUNY have remained virtually unchanged. This constancy is in spite of some substantial changes in the data for individual institutions, especially some of the community colleges. (NHM)

### INTRODUCTION

This is the second report prepared by the Central Staff Office of Institutional Research providing system-wide data on student retention and attrition. The data are presented in this report so as to provide a graphic as well as, numeric picture of the flow of students through the institutions of the State University of New York. This study will be a significant aid in promoting a better understanding of student flow, as well as providing new information relevant to the development of institutional policies and plans.

The factors of significant consequence in the development of a student's academic career and plans are varied and diverse; consequently, there are innumerable questions that may be asked regarding student attrition and retention. Any study which involves the longitudinal tracking of individuals over a period of time tends to be time-consuming and complex. Because of the desirability of designing a study that would yield significant information and still be capable of execution in a reasonable period of time, the questions formulated for purposes of this study have been restricted to those which could be answered by an examination of permanent records and transcripts. Within these restrictions; this study was designed to answer some fundamental questions, e.g., Of the group examined, how many received awards and how many did not? Of those that received an award, when did they receive it in terms of normal expectations? Of those that did not receive an award, how many were still enrolled? Of those that were no longer enrolled, how long did they attend the institution? In the case of two-year programs, how many of those who received an award or did not receive an award and were no longer attending, transferred to another college? More detailed information on the design and assumptions of the study will be found in the section titled "Methodology".

The accumulation of the information contained in this study involved a good deal of work on the part of individual campuses. We appreciate the cooperation and effort that went into providing this data. We would also like to particularly thank our professional, statistical and typing staff whose efforts made this report possible.

### \*METHÓDOLOGY

The problem of "measuring" student attrition and retention in an instructional program is complicated by a number of factors — some technical and some conceptual. Among the latter is the fundamental problem of defining the concept of attrition in an operationally significant manner. Regardless of its original meaning, the term 'attrition' as it is used within the context of higher education involves the concept of failure to achieve some goal or objective. It would, consequently, be improper to include within attrition figures a student who entered an undergraduate college and completed only one year of study if that student had no commitment to a program of full-time study leading to a formal degree, or no commitment to a specific goal which was not achieved.

The basic approach utilized in this study was to identify a group of <u>full-time</u>, <u>first-time</u> students enrolled in a degree program — called the "total conort" — and to arrive at attrition/retention information by tracing the flow of the cohort through the distitution. The reason for selecting a cohort of full-time, first-time students enrolled in a degree program was that they, by virtue of their enrollment, expressed a commitment to definable objectives. Specifically, they were committed to (i) full-time study and (ii) attaining a degree. This study is organized so as to provide information regarding the relative success of the cohort in achieving their goals.

The study examines the flow of two cohorts: (i) those students enrolled in bachelor degree programs, and (ii) those students enrolled in two-year degree programs. If comparisons are made between the two cohorts, a word of caution is advisable. It should be remembered that a student who enrolls in a bachelor's degree program and leaves the institution after two years without a degree will be counted as failing to achieve his objectives, whereas a student enrolled in a two-year program who receives a degree will have met his objectives. Yet, both students may have completed essentially the same course work and performed at essentially the same level of competence. Since a four-year institution does not give a formal degree for completing two years of study while a two-year institution does, comparisons between the two cohorts with respect to ability and achievement should be made with caution.

The tables in this study present information in the form of a flow chart, beginning with the cohort and following it through various subdivisions pertinent to determining the relative success of students in achieving their educational objectives. While this manner of presenting information is somewhat unconventional, it does communicate clearly and concisely the flow of the original cohort.

Attrition/retention, data in bachelor degree programs are based on a cohort of full-time, first-time students enrolled in the Fall of 1970. This cohort was divided into those who received a degree, thereby achieving their baccalaureate educational objectives, and those who did not receive a degree. The time allotted for completing a degree was divided in order to provide information regarding the number of students who, in terms of the conventional

four-year program, finished early, "on schedule", or up to approximately six months later. Those who did not receive a degree were further divided into those still enrolled, either part-time or full-time, and those no longer enrolled. The students still enrolled represent individuals who have not abandoned the'r objectives, but for some reason did not complete them within four years: > It would also be incorrect to infer that students who are no longer enrolled have abandoned their educational objectives. They may or may not have abandoned their original goals. All that is known for certain regarding the students who are no longer enrolled is that, for reasons which we do not have; their relationship with the institution has ceased. Again, a cautionary note, the reasons for leaving the institution may be many and various, e.g., financial, academic, abandonment of original objectives, illness, desire to attend another institution, or any variety of personal and non-personal reasons. Consequently, inferences made from the data regarding students no longer enrolled should be made with caution. In the case of students no longer enrolled, additional information is provided regarding the date of their last attendance. In general, this method of organization yields an accurate picture of student flow which is easily scanned. In addition to providing information regarding attrition/retention percentages, it also indicates for each institution the period during which the greatest attrition took place for that entering class.

Attrition/retention data in two-year programs are based on a cohort of full-time, first-time students enrolled in any associate degree program, or two-year diploma or certificate program in the Fall of 1972. The divisions of this cohort are similar but not identical to the divisions utilized for bachelor's degree students. Consequently, the same cautionary notes apply. The major difference in the case of two-year programs is that additional information is provided regarding the number and distribution of students who transferred to another college. This additional information was sought in the case of two-year programs since many of them are designed to be university parallel programs leading to transfer to another institution.

In interpreting the data for attrition in two-year programs, it should be noted that those students in a two-year program whose ultimate objective is to receive a bachelor's degree may, because of limitations on the transferability of credits and other factors, perceive it to be in their best interest not to complete the two-year program. Consequently, some students may not receive a formal award in a two-year program by prior design. In this instance, therefore, attention should be given to the students who do not receive a two-year degree but do transfer to another college.

All of the institutions of the State University of New York which offer bachelor or two-year degree programs are represented in this study with the following exceptions. The data for bachelor degree programs does not include the following: Utica/Rome since it has no first-time students; Empire State since it did not have an entering baccalaureate class in Fall 1970; all Health Sciences Centers; Optometry and Veterinary Colleges since they have no first-time students in a bachelor's program. The data for two-year degree programs does not include the following: Morrisville Agricultural and Technical College and the Community Colleges under the sponsorship of the New York City

Board of Higher Education, since none of these institutions submitted data; and Erie Community College - South, since it was not in operation at the time of the study. Included in the two-year program data is Upstate Medical Center since it does have first-time students in two-year programs.

### SUMMARY OF DATA

In 1974 the Central Staff Office of Institutional Research of the State University of New York published the results of an attrition/retention study which was conducted on a system-wide basis. The study utilized a student flow approach and resulted in what is, in all likelihood, the most complete attrition/retention study of a public multi-campus university system. The data included in this report represents the second such study by the University.

The 1974 publication contained a comparison of State University attrition/
retention data with national figures. The national figures were obtained from
a study by Alexander Astinb. While the 1974 publication pointed out differences
in methodology, and consequently the caution required in comparing State University and national figures, the retention rate of the State University appeared
to be superior to national figures; e.g., nationally a completion rate of 46.7
percent in bachelor's programs and 38.4 percent in two-year programs compared
with the State University's 54.4 percent completion rate in bachelor's programs
and 43.3 percent in two-year programs.

The current data indicates that the State University maintains a favorable position with regard to the national data. The most striking characteristic of the current data, when compared with the previous report, is that the data at the summary level have remained virtually identical. This is not to suggest that there have been no changes in the data for individual institutions. While there are indeed interesting changes at the level of individual institutions, the aggregated data for bachelor degree programs and two-year programs is remarkably stable:

The stability of the data is particularly evident in bachelor degree programs. For example, in the class of 1973, 54 percent of the cohort received a bachelor's degree, 8 percent did not receive a degree but were still enrolled, and 38 percent did not receive a degree and were no longer enrolled; the corresponding percentages for the class of 1974 are identical; viz., 54 percent, 8 percent and 38 percent, respectively.

The data for two-year programs also exhibit a high degree of stability. For example, in the class of 1973, 43 percent of the cohort received a two-year award, 10 percent did not receive a two-year award but were still enrolled, and 46 percent did not receive a two-year award and were no longer enrolled; the corresponding percentages for the class of 1974 are virtually the same, viz., 42 percent, 11 percent and 45 percent, respectively.

In some respects it is more difficult to characterize the "drop-out" in a two-year program since many of the students who do not receive a two-year award transferred to another institution, and that may have been their major

Attrition and Retention of First-time, Full-time Students in Two-year and Baccalaureate Degree Programs, Class of 1973. Central Staff Office of Institutional Research, Report No. 4-74.

Astin, Alexander. College Dropouts: A National Profile. American Council on Education, AGE Research Reports, Vol. 7, No. 1, February 1972.

XII / xiii

objective. In addition, some students who carcll in a two-year program receive an award in a program of less than two years. Taking this into account, in the class of 1973, 68 percent of the cohort either received an award, were still enrolled, or transferred to another institution; for the class of 1974, the corresponding figure is 67 percent.
